

It is important to highlight that ACTIVAGE ambition is that end users from the different sites are involved in the piloting of several use cases, in such a way that it is considered a single pilot and not the sum of different pilots with diverged ambitions. This has been thought intentionally to simulate real conditions that will emerge in an IoT-enabled European society sharing a homogenized offering of interoperable services, in order to maximize the adoption and minimize the effects of market fragmentation. ACTIVAGE Deployment Sites' composition represents the European reality: a wide range of social models; different target elderly populations with the goal of extending independent life; informal and formal carers; different types of potential business models and mixed participation of public and private service providers; different IoT solutions mixed in different ways. The following Use Cases will be covered:

-  Daily activity monitoring
-  Integrated care
-  Health parameter monitoring
-  Emergency trigger
-  Exercise promotion
-  Cognitive simulation
-  Prevention of social isolation
-  Safety, comfort and security at home
-  Mobility monitoring and advice for active mobility
-  Notification of abnormal situation
-  Support for caregivers
